

Disaster Response Services

24/7 Emergency Response Hotline: (877) 572-3609

Community wide response actions

Flood damaged building

Tornado damaged building

Proven Expertise

- Structural assessments and evaluation
- Restoration analysis, design, and reconstruction
- Definition of structural “hot zones”
- Written area entry protocols and pathway plans
- On-going “real-time” evaluations
- Bracing, shoring and reinforcement, and selective demolition recommendations
- 24/7 Emergency response hotline (877) 572-3609

Your Priorities

Damage to structures may occur as a result of a wide variety of disasters. After a long, snowy winter, the midwest is accustomed to dealing with annual flood issues. During these events, responders, adjusters, and volunteers will descend on sites with potentially unstable conditions. These sometimes dangerous situations require highly-trained experts who understand disasters and can efficiently coordinate and advise how to get structures repaired and functional. We can assist with building assessment and/or planning the entry into damaged buildings, and we can help owners put the pieces together with plans for restoration, rebuilding, and reconstruction.

Our Experience

Clark has experience in responding to disasters and we have assembled a team of professionals to assist with assessing structural impacts from flood damage and can provide plans and restoration should flooding occur. This specialized team extends what we can offer clients beyond our traditional structural, civil, or survey engineering services to include environmental impacts and deployment of contractors who can rapidly stabilize, restore, and repair. This turnkey approach allows building owners to return to “business as usual” as soon as possible.

Meeting Your Needs

With our experience in responding to businesses and communities hit by unfortunate disasters, we are confident we can efficiently and quickly meet our clients needs. We hope we aren’t needed, but if we are, our clients can rest assured we are experienced professionals with the resolve to get things done.
