

Restoration, Renovation & Forensics

Westminster Church Interior

Westminster Church Facade

Princeton Middle School

Proven Expertise

- Restoration and renovation of buildings
- Top to bottom structural assessments including:
 - Condition studies
 - Structural analysis
 - Pre-purchase inspection
 - Cost/benefit analysis
- Forensic engineering and failure investigation including:
 - Structural failures
 - Fire, flood, and other natural disasters
 - Corrosion damage

Your Priorities

Keeping a building operational with minimum disruptions during all phases of restoration and renovation can be crucial. At the same time, attention to quality must remain the highest priority. Clark Engineering Corporation (Clark) understands those expectations. We have extensive knowledge of materials and techniques to renovate structures while maintaining intended integrity. We also work with our clients to create an effective work plan that is the least disruptive.

Our Experience

We provide a myriad of services for all types of structures. We have experience with buildings, building façades, parking ramps, foundation systems, tunnels, chimneys, swimming pools, bleachers, areaways, bunkers and hoppers and other unique structures.

Meeting Your Needs

Clark has extensive experience with the construction materials and structural systems used in buildings constructed from the early 1900's to present day. We feel that each structure is unique and faces site-specific environmental and aging challenges. We understand these challenges and use our expertise to provide cost-effective results in restoring function and architectural quality.
